

The double face rectification specialist

Quality is essential

Main Activity .

For over 35 years, Méca-Rectif has offered its services in double face rectification to the automobile industry.

This process consists of passing in succession flat metallic parts of between 8mm and 220 mm between double discs grinding wheels to obtain the right thickness.

With a quantity of a few hundred parts, the process of double face rectification becomes competitive in comparison to traditional rectification methods.

Today Méca-Rectif produces millions of parts every month and covers the treatment and packaging of 7500 referenced parts.

Up to 5 microns

Our customer's specifications dictate our activity in the strictest respects of tolerance, state of the surface, thickness, flatness, evenness, and alignment. Our know-how is unique: Méca-Rectif can work in large batches as well as small batches while respecting the precision required:

- +/- 5 microns is the tolerance for thickness
- Ra 0,4 for the surface
- Cpk 2 for capability

R&D is essential for Méca-Rectif

Since the great changes in 1995 when the advancement in technology enabled for the treatment of parts with a more complex geometry, Méca-Rectif grew from 10 employees to 43 in less than 10 years and had a turnover of ≈ 3M in 2004.

We invest 5% of our annual turnover back into the company because we believe that it is the key factor to our continuing success.

The essential partner for the automobile industry

With highly experienced experts we offer a service of double face rectification for small and large batches. Our machines are adaptable and our personnel have frequent training sessions. We offer the best to our customers.

Controls: Quality is the essence

We answer to the needs of our customers and can either have a 100% control or an on the spot control.

Certifications that Méca-Rectif hold:

- ISO 9002 Certification version 1994 which we have held since 2001
- ISO 9001 Certification version 2000 which we have held since 2004
- ISO TS 16949 currently undergoing Certification (should be certified in 2006)

New services offered to our customers:

Pollution treatment of metallic parts

Méca-Rectif has integrated its first machine specialised in treating pollution of metallic parts.

Subcontracting

Méca-Rectif takes over the whole subcontracting process along with the double face rectification and packaging as well as heat treatment and machine finishing.

Emergency orders

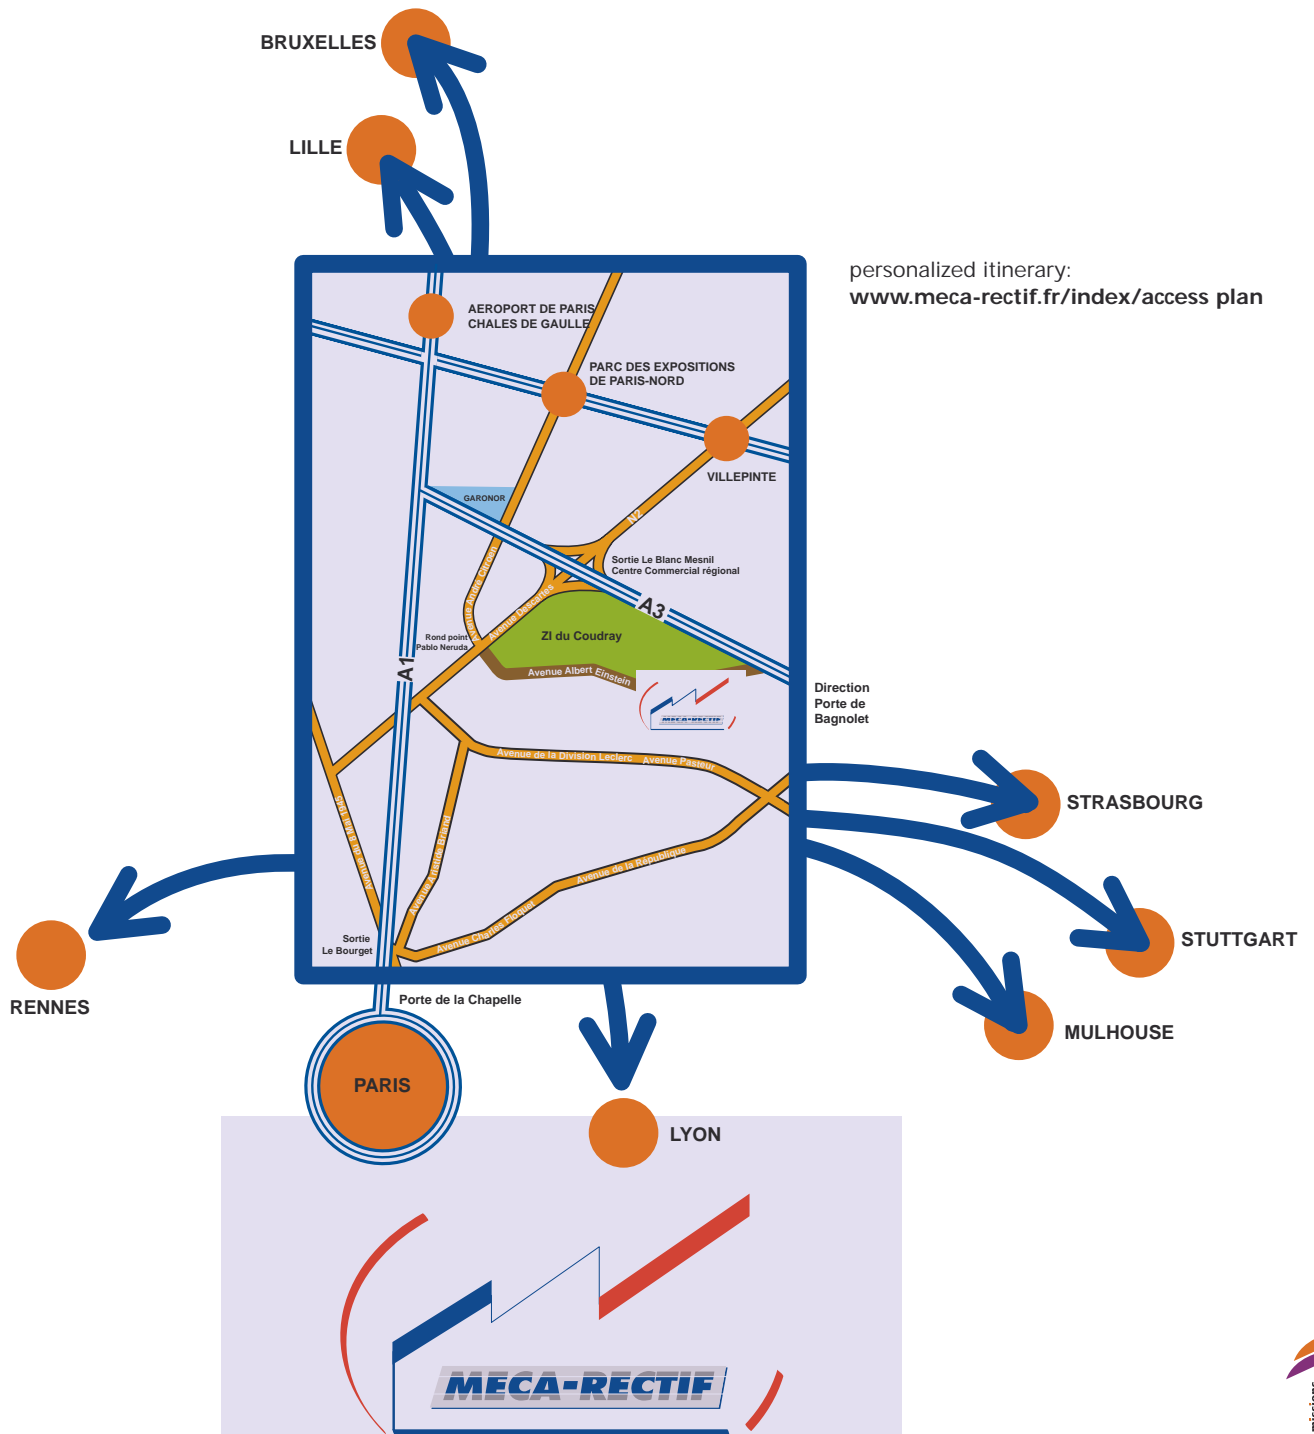

Being able to work in an emergency mode enables us to offer our experience and expertise as an « Emergency Orders Specialist ».

If you need double face rectification or pollution treatment of metallic parts carried out

- ... And if these words
- Flexibility
- Customer service
- Availability
- Customer deadline priority
- Quality
- Price
- Capacity
- Confidence
- Adaptability
- Reactivity ...
